REX PROFESSIONAL STAFF - bringing you innovative, technological breakthroughs.

NC Automated Line

The key to the success of the 'Made in Japan' brand is a production line that has the ability to produce many kinds of high quality goods in small quantities.
(Photo: Main Factory/ Processing Dept.)

3D Measuring Instruments

3D measuring instruments are used to check complicated 3D shapes accurately.

Tottori Factory / Automated Dies Line

Under the banner of "Making the Best Match between Blade and Tool", the Tottori Factory is where we produce various kinds of blades, such as dies for pipe threading machines, blades for band saws, etc.

USA Job Skills Olympics

REX pipe threading machines were used in the finals of both the Sprinkler Competition and the Electrical Construction Work Competition at the US Job Skills Olympics.

Overseas Exhibitions

We actively participate in trade exhibitions overseas and gather information for market and new product development.

Technical Training, Factory Tours

At the request of the end user or distributor, Rex provides factory tours and/or technical training, such as practical training for examinations in plumbing techniques, lectures on roll threading for earthquake-resistant buildings and environmental issues.

Suzhou Factory, China

Suzhou factory provides a wide range of reliable parts made with facilities and equipment that are on a par with those of Japan REX. In addition, Suzhou factory produces merchandise for Chinese users, as there is a full production line from casting to processing, painting and assembly.
