No. 10 LINK CUTTER OPERATION MANUAL

Number of Link Cutter Blades

Steel pipe	Size	80A	100A	125A	150A	200A	250A
Steer pipe	Maximum thickness(mm)	4.2	4.5	4.5	5	5.8 A 200A	6.6
Ductilo nino	Size	75A	100A		150A	200A	250A
Ductile pipe	Maximum thickness(mm)	7.5	7.5		7.5	7.5	7.5
	Links	3	4	5	6	8	10
C	Connecting links		1	1	1	1	1
	Blades	5	6 7 8 10		12		

Removing and Attaching a Link

- Refer to the Table above to select the number of links required based on the nominal size of the pipe. Add or remove links accordingly. (Fig. 1)
- Removing a link:
- (1) Remove the snap pin from the round head side of the link pin. (Fig. 2) (2) Use a monkey wrench or similar to turn the flat head side of the link pin,
- and remove the pin so as to release the roller, washer and blade wheel. (Fig. 3) • Attaching a link:
- As shown in the diagram, align the roller, washer and blade wheel in relation to the link, and attach a link in the reverse order to the above.

Attaching the Link Cutter

Wrap the link around the pipe where you want to cut it, place the hook over the end of the connecting link, and turn the hexagonal nut with the ratchet handle to tighten the link around the pipe. (Fig. 4)

Warning

- (a) Make sure the hexagonal nut is turned fully back before wrapping the link around the pipe.
- (b) Attach the link cutter so that the blades are at right angles to the pipe.

Cutting

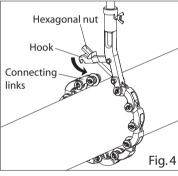

Move the handle back and forth at least 60⁰ (for 250A pipe) or 100⁰ (for ductile pipe size 75 & steel pipe size 80A), turn the hexagonal nut with the ratchet handle and the blades will start cutting into the pipe. For each movement back and forth of the handle, turn the ratchet wrench approximately 1/8 of a turn (45^O). (Fig. 5)

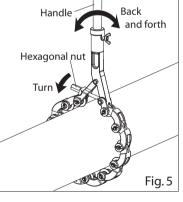

Dismantling the Link Cutter

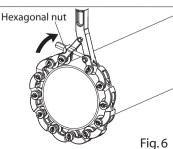

Loosen the hexagonal nut with the ratchet wrench, unscrew the hexagonal nut by hand as far as it will go, and then lift the hook off the connecting link. (Fig. 6)

No. 2 LINK CUTTER OPERATION MANUAL

Number of Link Cutter Blades

Size	75A	75A 100A		150A					
Maximum thickness (mm)	12								
Links	3	4	6	8					
Connecting links	1	1	1	1					
Blades	5	6	8	10					

Removing and Attaching a Link

- Refer to the Table above to select the number of links required based on the nominal size of the pipe. Add or remove links accordingly. (Fig. 1)
- Removing a link:

Use a flathead screwdriver to unscrew the link pin and pull it out. (Fig. 2)

- Attaching a link:
- Attach a link in the reverse order to the above.

Attaching the Link Cutter

- Wrap the link around the pipe where you want to cut it, place the hook over the end of the connecting link, and turn the hexagonal nut with the ratchet handle to tighten the link around the pipe. (Fig. 3)
- Warning
- (a) Make sure the hexagonal nut is turned fully back before wrapping the link around the pipe.

(b) Attach the link cutter so that the blades are at right angles to the pipe.

Cutting

Move the handle back and forth at least 60⁰ (for 200A pipe) or 100⁰ (for 80A pipe), turn the hexagonal nut with the ratchet handle and the blades will start cutting into the pipe. For each movement back and forth of the handle, turn the ratchet wrench approximately 1/8 of a turn (45⁰). (Fig. 4)

Dismantling the Link Cutter

Loosen the hexagonal nut with the ratchet wrench, unscrew the hexagonal nut by hand as far as it will go, and then lift the hook off the connecting link. (Fig. 5)
